

Ecology Action Centre – Candidate Survey 2024

Candidate for Mayor

Name of Candidate: Greg Frampton

1. The [Halifax Green Network Plan](#) (HGNP) should be used to guide the region's growth, but full implementation of the plan requires resources and enforceable rules to protect important greenspace and wildlife corridors. Will you support the full implementation of the HGNP to protect the Green Network? Explain why or why not (optional).

No. As Mayor I will do what is best for the people who live here. Most likely it is the opposite of what your group wants.

2. Will you commit to ensuring Halifax Transit attracts and retains enough staff to implement the Bus Rapid Transit (BRT) network and ferry routes in the [Rapid Transit Strategy](#)? Explain why or why not (optional).

No. this plan is meant to limit halifax transit to the inner city. so a big NO. I want to expand transit to the sub urban areas and have more and more homes built out there.

3. Will you commit to implementing the [Road Safety Strategy](#) and achieving its vision of zero injuries and fatalities across all modes of transportation? Explain why or why not (optional).

No.

4. Are you committed to ensuring the continued implementation and full funding of the [JustFOOD Action Plan](#) as the municipality's first comprehensive, long-range food strategy, which will increase collaboration across levels of government and among community partners, strengthening our collective capacity to build a just, healthy, and sustainable food system. Explain why or why not (optional).

No.

5. With climate change wreaking heat waves even in temperate climate zones, and the price of home-heating fuel spiking due to global conflict, access to affordable home energy efficiency has become a human right crucial to comfort and standard of living. Cities across Canada are seeing tenants mobilize for these rights. As an elected official, would you

support a "right to efficiency" by-law supporting tenants' rights to affordable energy efficiency support? Explain why or why not (optional).

No. You are trying to make housing even more unaffordable than it already is. Climate change is not caused by human activity. This is a ploy of the left in order to control the activity of citizens - with the results only to be known hundreds of years from now. Read more at mayorgreg.ca

6. There are multiple stressors on local freshwater quality and quantity such as increased development and an increase in water-related climate events (e.g., floods, droughts, storms). Do you commit to advocating for and supporting watershed level management in municipal planning? Explain why or why not (optional).

No. Canada, Nova Scotia, and HRM has all kinds of fresh water, I will not allow any restrictions whatsoever

7. Will you, in the absence of a provincial Coastal Protection Act, advocate for and work towards passing municipal by-laws designed to address development on vulnerable coastal properties and infrastructure? Explain why or why not (optional).

No thanks
